## CAN I BENEFIT FROM SHOCKWAVE THERAPY?

---

Pain therapy using shockwaves is applicable for a wide range of indications, such as **acute or chronic pain** in shoulders, heels, muscles or tendon attachments.

In contrast to surgery or therapy with medications, shockwave therapy, particularly with the LiKAWAVE VARIO 3i<sup>®</sup>, **is fast and risk-free**. Improvement can be felt after as few as two or three sessions.

Whether this type of treatment is applicable for your specific case is your decision informed by the advice of your doctor or therapist.

# THIS IS WHY YOUR THERAPIST TREATS YOU

with the LiKAWAVE VARIO 3i®

## HD CERAMIC PROJECTILE

**Atraumatic and gentle on your cells:** The new type of projectile, which generates the energy pulse of the LiKAWAVE VARIO 3i®, is made of HD ceramic. This special material smooths the negative range of what is referred to as the "pressure curve". This reduces the pain.

## WIDE FOCUS

**More effective for deep-rooted pain:** In contrast to conventional, point-focused pulse sources, the modified "wide-focusing" pulse source of the LiKAWAVE VARIO 3i® generates an area focus that has high energy to reach even deeper tissue layers.

## INVERT-MODE

**Longer-lasting cell stimulation:** The innovative invert technique allows the user to vary the existing energy-pulse relations, thereby increasing the indication spectrum. The shockwave activates the self-healing effect and results in fast and long-lasting success of the therapy.

## *HOW DOES A SHOCKWAVE WORK?*

---

The shockwave affects a wide range of points on the body affected by the underlying condition and accelerates the self-healing process. It improves the metabolism and increases local blood circulation. Inflamed or damaged tissue regenerates and is able to heal itself.

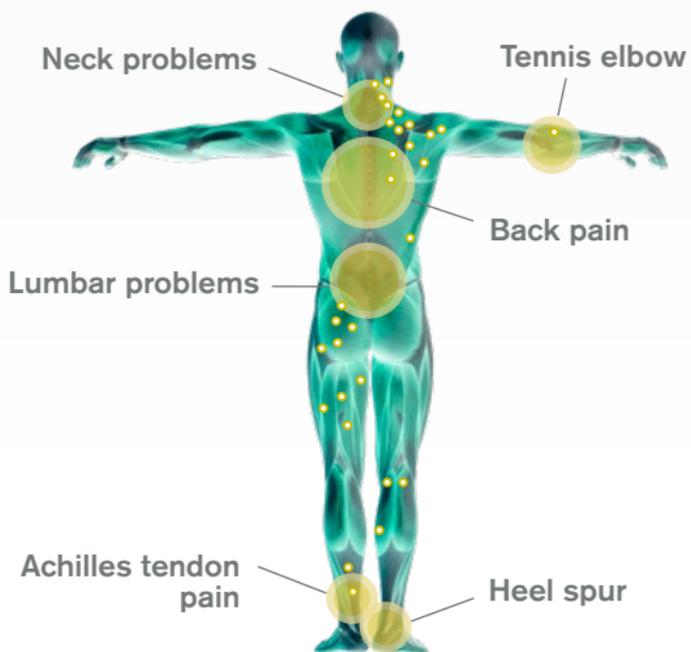

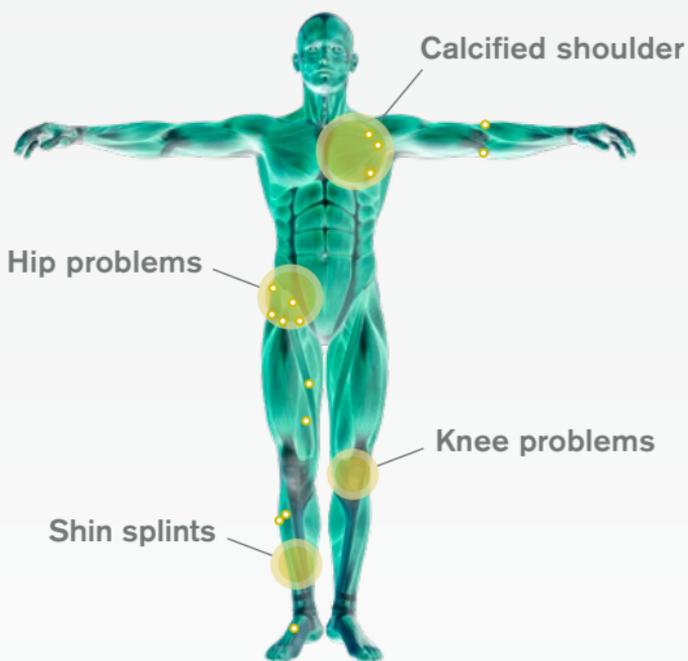

## *WHAT ARE SHOCKWAVES?*

---

The term "shockwave therapy" refers to mechanical pressure pulses that propagate within a human body as a wave and are directed to the parts of the body suffering from pain, where they activate the self-healing properties of the body.
